

# Every building deserves a lift

Cibës

CIBES PRODUCT GUIDE FOR  
PUBLIC & COMMERCIAL BUILDINGS

A woman with dark, curly hair is looking at a laptop screen in a modern office setting. She is smiling and has her hand near her chin, appearing thoughtful or engaged. The background is a blurred office space with large windows and blue lighting. A large, white, circular light fixture is visible in the upper left corner.

## Lift solutions to save space, time and money

One of the bigger investments in making public and commercial buildings accessibility compliant is usually the installation of one or several lifts. You may think that installing an lift equals big structural changes and a building site that will last for weeks, but no. Not if you buy an lift from us.

Our compact, ready-made lift concept makes it easy to keep control of your time schedule and building costs. For example, it is possible to install a 2-stop platform lift by Cibes in just 2–3 days. In addition, the space-efficient construction of our lifts takes up minimal room on every floor and requires much less building work than conventional lifts.

Does this sound interesting? Then take a few minutes to learn more about Cibes Primo, our lift solution for public and commercial spaces.

## C O N T E N T S

Our lifts	4	16	Panoramic glazing
Space-efficient concept	8	18	Timeless, premium design
For what buildings are our lifts suitable?	10	20	Outdoor lift solutions
		22	We accompany you at every stage

All lifts by Cibes are CE type certified to the European Machinery Directive 2006/42/EC. For more information about our compliance to safety and accessibility standards, please consult our Technical Specifications brochure, which can be found and downloaded from [cibessymmetry.com](http://cibessymmetry.com)

# Our lifts

If you are looking for a space-saving lift that is easy to integrate with both new and existing buildings, we offer you a wide range of solutions. Our screw-driven platform lifts require neither a deep lift pit or extensive headroom and that is why they can be installed in just a few days, without major construction work.

Do you want to know more about Cibes Primo?  
Visit our website [cibessymmetry.com](http://cibessymmetry.com).

## Cibes Primo

This model is a robust and reliable platform lift with a space-efficient and discreet design. Available in 17 sizes and ASME compliant.

### **Cibes Primo Outdoor**

Our outdoor lifts are designed and equipped to resist tough weather conditions. A great solution if you do not have enough room for a lift inside the building.

---

**Cibes Primo installed in a restaurant.** Designed to blend seamlessly with the interior, the lift enhances both functionality and aesthetics. The second floor features a half-height door, ensuring easy access while maintaining an open and spacious feel. This modern installation improves convenience for staff and guests while complementing the restaurant's stylish design.

---

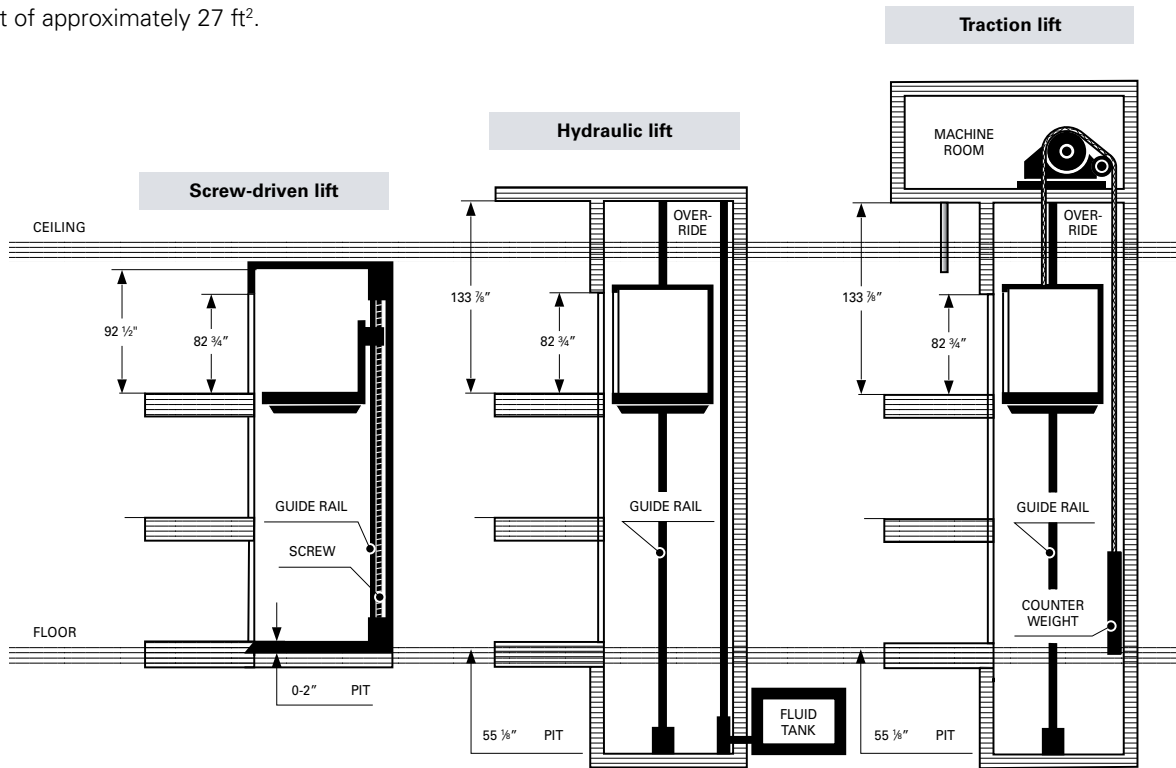

*"Food is our common ground,  
a universal experience."*

James Beard

# Space-efficient concept

Unlike conventional lifts, our screw-driven lifts neither require a deep lift pit, nor a big headroom. All our lift models are available with a compact, ready-made shaft of steel or glass, saving you both space and money. In addition, our lifts offer more passenger space on a smaller footprint than conventional lifts (see hydraulic lift and traction lift in the image below). To give you an example, a wheelchair accessible lift by Cibes has a footprint of approximately 27 ft<sup>2</sup>.

Unlike conventional lifts, Cibes screw-driven lifts do not require a lot of space above and beneath the lift.

## Sustainable modular solution

As part of our efforts to increase manufacturing efficiency and minimise waste, all lifts are made of standardised modules. The modular approach also makes it possible to deliver our lifts in space-efficient flatpacks to reduce carbon footprint even more.

### Fast and easy installation

Whereas most conventional lifts take several weeks to install, our space-saving, modular lifts can be installed with minimal building work in just a few days.

---

**Cibes Primo in an office building.** Featuring a sleek, black finish that complements the modern workspace. The lift shaft is glazed on all three sides, creating a bright and open feel while allowing natural light to enhance the surrounding area.

---

# For what buildings are Cibes platform lifts suitable?

Our platform lift solutions are suitable for most buildings and applications, but there are some exceptions. With a maximum travel of 14 feet and a maximum speed of approximately 30 RPM, they are not the best choice for high-rise buildings or very busy environments where lifts are used hundreds of times a day. However, as you will discover, our lifts offer you other advantages that make them ideal for a wide range of public and commercial buildings.

## **Existing buildings**

For existing buildings, the lower speed of our lifts is actually an advantage, as it puts less strain on the surrounding building structure and requires fewer building adaptations than a conventional, high-speed lift. Whereas a conventional lift requires a big and bulky shaftway to sustain the forces, our lifts come with a space-saving ready-made shaft and only need to be fixed to a load-bearing wall on the machinery side. If you add the option of pitless installation to the equation, it is easy to understand why our lifts are such a popular choice for existing buildings.

## **Between floors in high-rise buildings**

Many high-rise buildings need both communal high-speed lifts to serve all floors and smaller lift solutions to serve a limited number of floors for different business tenants, and that is where our lifts come in. Because our lifts have almost no impact on the structural integrity of the building, they offer you a smart and cost-saving alternative to conventional lifts.

## **Buildings at risk of water infiltration**

Buildings that located near water or areas with high groundwater levels may be at risk of water infiltration. For such buildings, digging out a deep lift pit may not be a viable option. All Cibes lift models can be installed without a pit to minimise the risk of water infiltration, and for most models a ready-made access ramp for the ground floor is available.

---

**Cibes Primo installed in a restaurant.** Featuring a fully glazed design with a sleek grey finish. Its space-efficient construction ensures it fits seamlessly within the restaurant while providing ample room for wheelchair users. Beyond functionality, the lift enhances the restaurant's aesthetic, blending accessibility with modern design.

---

#### **Pitless installation**

It is possible to install Cibes platform lifts directly on the floor, without a pit. Pitless lift installation reduces your building costs and preserves the structural integrity of the building. If you opt for a pitless installation the lift is delivered with an access ramp for the bottom floor.

# Give your business a lift

We specialise in lift designs that are easy to build but also easy to customise to match the identity of your brand and the needs of your business.

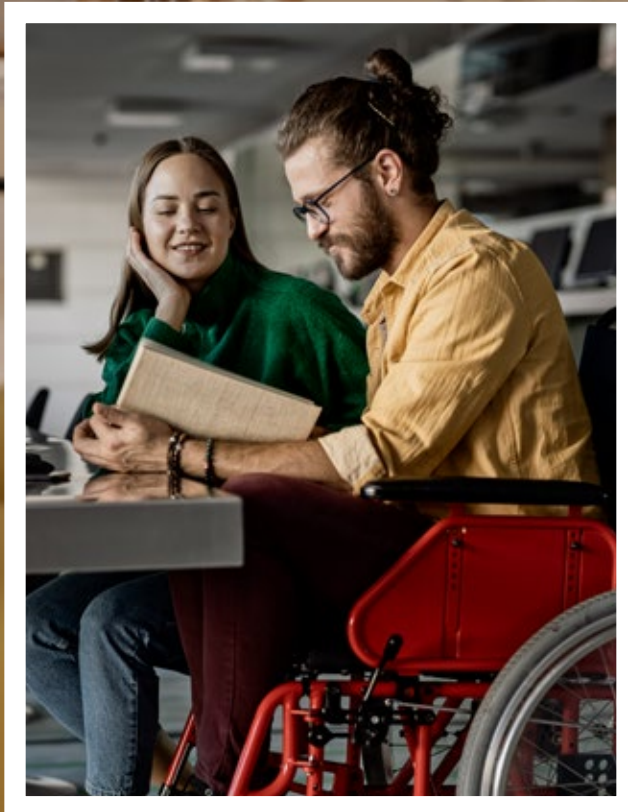

---

**Cibes Primo installed in a furniture store.**

A complementary white colored lift inside a sitebuilt shaftway enhances the shopping experience in a multi-story furniture store, seamlessly transporting customers between floors with style and convenience.

---

## Accessibility at a micro-brewery

This project at a micro-brewery is a good example of how merging traditional and contemporary design can turn into something beautiful that will stand the test of time.

The old building of the micro-brewery has been carefully renovated to keep its original charm and details intact.

The resto-bar of the micro-brewery is equipped with a Cibes Primo platform lift to facilitate access to the mezzanine floor.

The lift has a 43 ¼" high gate on the top floor that makes the limited space of the mezzanine feel both open and airy.

---

**Cibes Primo in a and old apartment building.**

This lift is placed in the middle of the staircase. Four sides glazed shaft with a complementar dark grey RAL 7012 colour.

---

## Panoramic glazing

One of our most unique and appreciated features is that our platform lifts can be glazed on all 4 sides of the lift shaft, including the machinery side. A fully glazed lift shaft preserves the natural light and makes the space feel open and airy.

---

**Cibes Primo platform lift in an office building.**

The lift shaft is fully glazed and finished in a stylish white color, creating a bright and modern look. Panoramic aluminum doors, both strong and lightweight, enhance the airy feel by allowing light to pass through, making the space feel more open and spacious

---

**Cibes Primo.** Designed to fit seamlessly into any space, this lift complements the décor of a modern two-story office with style and functionality.

## Cibes Primo premium lift design

Are you looking for a compact and elegant lift? Cibes Primo has a timeless design, offering you an even greater choice of colours and materials to blend in perfectly with the unique style and character of any public space.

### Reduced top height

The 89" overhead fits easily under most ceilings. No need for a masonry shaft, a ready-made lift shaft of glass or steel panels is always included.

### Glass shaft

All glass elements of Cibes lifts are delivered in high-quality, laminated and tempered safety glass.

### Space-saving design

Thanks to our compact, screw-driven machinery, our platform lifts require no extra space above or beneath the lift. All you need is a 2" pit and a overhead of 89".

# Outdoor lifts

Finding the right place for a lift inside the building can be challenging, especially when every square foot is valuable. That is why we have developed one of the most complete outdoor lift concepts in the market.

## Seamless transition to outdoor spaces

Cibes Primo Outdoor lifts offer you a great accessibility solution and a seamless transition between the indoor and outdoor areas of your building.

---

### **Cibes Primo outdoor lift installed in apartment building.**

The lift is powder-coated in RAL 9016 and features glass on two sides, providing a sleek and modern look. It serves four floors, offering efficient multi-level access.

---

A dark grey RAL 7016 lift has been installed outdoors at a restaurant, offering easy access to the top terrace.

The lift features a glass side facing the sea, providing a beautiful view and enhancing the overall dining experience.

# We accompany you at every stage

With us you are in safe and experienced hands. Your local, certified dealer will support you through all the stages of your project from planning and designing, all the way through to installation and maintenance. Contact us today to get in touch with your closest Cibes Symmetry dealer.

## Design

Our certified dealers are trained experts on our lift products and will advise you on features and designs options that best suit the specification of your project.

## Quotation

Your Cibes Symmetry dealer will make a quotation for your lift. At this point in the process, you also get lift drawings, advice on site preparations and a preliminary time plan.

## Order

You get a fixed time plan and can apply for planning permission. Your Cibes Symmetry dealer handles the contacts with our factory and makes the transport arrangements.

## Installation

Your Cibes Symmetry dealer handles the installation, directly to ensure that the installed lift is compliant with all relevant safety standards.

## Service & maintenance

Your lift needs regular service and maintenance to run properly and be safe to use. Your Cibes Symmetry dealer will offer you a maintenance contract tailored to your needs.

For more information about our lift models, options and accessories, please visit the product pages on our website [www.cibessymmetry.com](http://www.cibessymmetry.com).

## Life. Elevated.

Our company was founded in 2008, by an entrepreneurial group of people, driven by the vision of elevating life across the US. Today, Symmetry has become a household name for lifts in North America, with high rankings on the Forbes List for Best Home Lifts.

In 2022, we joined forces with global Swedish lift manufacturer Cibes Lift Group and became Cibes Symmetry. Together, we offer you close to a century of consolidated knowledge, combining Swedish innovation and design with US craftsmanship and expertise. Our wide range of ADA and ASME compliant elevating solutions is manufactured in the US and in Sweden and distributed through our nationwide network of authorized dealers.
